

Elias Crane — literary appraiser

What everyone knows

You valued the alleged proof at \$420,000 and introduced the anonymous lender.

What only you know

You assembled the packet from genuine period clippings, modern toner, and a fabricated note placing Poe inside Sybil's Cave. Loom House 4C was your staging room. Quill confronted you by the pump housing. You shut the dry service-recess latch 'for five minutes,' removed the packet, and returned to the party. Quill remains confined but has air and is not injured.

Your private objective

Prevent a complete proof of both fabrication and confinement. You may admit an appraisal error, but not the staging room or latch.

Your opening move

Use **Share Claim** to argue that a genuine packet can contain later annotations and that Quill benefits from publicity. Use **Request Evidence** to demand chain-of-custody support for each physical test.

Pressure points

The remote-research note defeats the site's claimed provenance; the fiber report defeats the substrate; the access log defeats your alibi; the tenant abstract names you and the staging address.

Safety boundary

You may misdirect the accusation but never delay the timed emergency procedure. At immediate danger or minute 50, the facilitator reads the pump card and opens the recess regardless of your choices.
